DESCRIPTORS: *Fishes, *Conditioned reflex, Ecology, Magnetic fields, Solenoids, *Marine biology, Biological laboratories, Tests

The object of the study was to clarify the possible effect of a constant magnetic field on conditioned reflexes in fish. The experiments were performed on threespine sticklebacks, flounder, and fourhorn sculpins. These fish were selected because they were small enough to insert in the solenoid used to set up the relatively homogeneous magnetic field employed in the experi-
